

## Bounce & Focus

By changing position of light from direct to indirect and focus of light through center pole, Bounce & Focus brings more versatility to your lighting system.

Indirect fitting of light head creates beautifully bounced light. With center focus pole pushed in or pulled out, you can enjoy a different level of light intensity as well as light spread.

Compatible with medium and large size Aurora softboxes and it is highly recommended for use with parabolic TERAD softbox of which focusing range is wider.

### FEATURE

#### *Sparkling and crispy reflection*

With light head mounted to Bounce and Focus attached to Aurora softbox, light hits to lining of softbox swirling around and bounces back to front. Reflection of indirect positioned light is softer than the other. Not too harsh but sparkling reflection from parabolic TERAD softbox is one of the reasons for being popular for fashion and beauty photography.

#### *Focus in or out for your need*

Harsh contrast spot light to evenly diffused flux light, Bounce and Focus offer you a great versatility. Simply pull out center pole to extend your light position or push it in for focused position. Focusing is simple and easy to complete.

*Focused position*

Focused in position creates reflection concentrated in the center of softbox. Contrast becomes high as well as light intensity so it is a choice for dramatic look.

Mid position

In the mid position, light reflection fills in most part of softbox so creates the softest light of all. Enjoy sparkling reflection with not strong shadow.

Extended position

In the extended position, light reflection is around the frontal edge of softbox creating rim light. Contrast becomes low and it is a choice for soft and flat image.

### *Universal fitting*

Topped with 3/8" stud, Bounce&Focus accepts all industry standard flash heads weight less than 4kg (막대봉에 조명을 바로 체결한 이미지 보여준다.)

For even and center focused light distribution, an adaptor of user's choice from 5 major brands; Aurora/Bowens, Profoto, Elinchrom, Hensel, and Multiblitz is included in the system. (5가지 링의 이미지 모두 보여준다.) Max loading 3.4kg

### *Perfect balance*

Sliding problem is often observed with giant softboxes due to heavy weight which results in limitation with tilting. Sandbag counter weight included in the Bounce and Focus system is easy to use and provides a perfect balance.

## IN THE BOX

Heavy duty aluminum pole topped with 3/8" stud

Adaptor ring

Speedring completed with tilting bracket

Sandbag counterweight

## Specifications

| Model              | Bounce & Focus medium | Bounce & Focus Large |
|--------------------|-----------------------|----------------------|
